TRU-POINT™

EASY AND FAST CALIBRATION WITH PROCESS VALIDATION

Tru-Point™ uses highly accurate, advanced camera technology, targets, and top-of-the-line software to quickly uncover any alignment problems a vehicle might have, so you can perform a perfect ADAS calibration.

Tru-Point™ streamlines the process from beginning to end with simple, real-time, and interactive visual indicators, eliminating the need for manual measurements or complicated guide references. Our intuitive, ergonomic controls are enhanced by the on-screen indicators to easily and precisely position the system to meet OEM requirements.

STEPS REQUIRED FOR A CORRECT CALIBRATION

It takes more than just pushing a few buttons for a precise ADAS calibration. In order to produce accurate and reliable results, shops must take into account a number of essential steps and follow the appropriate procedures.

01

FLOOR SPACE / LIGHTING

Our ADAS Specialists can help ensure successful calibrations with proper lighting and open space when you choose for an equipment that does compensate for an unlevel floor.

02

SERVICE INFORMATION

Any damage to the vehicle may damage sensors and cameras. Access to repair procedures is key for returning vehicles to safe operating conditions.

03

VEHICLE ALIGNMENT

Most OEMs require that wheel alignment be performed prior to ADAS calibration.

04

TARGET PLACEMENT

Accurate target positioning drives the success of calibration, as well as the shop productivity and profitability. Most importantly, shops need to follow OEM-specific target placement instructions.

05

SCAN TOOL SOLUTION

Tru-Point is scan tool agnostic. A comprehensive scan tool with ADAS functionality is all you need to complete calibrations. Tru-Point works with aftermarket, OEM, J2534, or remote calibration services.

FLOOR LEVEL IS CRITICAL FOR PROPER CALIBRATION

Tru-Point™ adjusts the height of a target to be in perfect field of view of the camera while moving equipment out in the distance, automatically compensating for lack of levelness on the workshop floor.

WHEN GOOD ENOUGH ISN'T ENOUGH, JB.

MAXIMUM PRECISION

Achieving the highest level of precision is no longer a challenge. A simple color-coded visual indicator allows you to easily identify the exact location for target placement, going from red to green. Done!

VALIDATION REPORT

Tru-Point™ generates a printout report as evidence that the targets were placed according to OEM specifications during the procedure. Not only does the printout list and indicate that the ADAS components were placed correctly around the vehicle for all the possible unique measurement properties, but it also confirms that the vehicle's wheel alignment meets the specifications required for calibration.
